Appendix III : Definition of Key Terms Used in the MC&I(Natural Forest) ......................................... 49
1. Introduction

The Malaysian Criteria and Indicators for Forest Management Certification (Natural Forest) [or in short the MC&I(Natural Forest)] supersedes the Malaysian Criteria and Indicators for Forest Management Certification [or in short the MC&I(2002)], as the standard to be used for forest management certification of natural forests at the forest management unit (FMU) level in Malaysia.

2. Background

2.1 The MC&I(2002) has been used as the standard for forest management certification under the Malaysian Timber Certification Scheme (MTCS) operated by the Malaysian Timber Certification Council (MTCC) since October 2005. In line with international practice and the standard setting process for the development of timber certification standards adopted under the MTCS, where it is required that the certification standard used is to be reviewed at least every five years to ensure continuous improvement, the MC&I(2002) was subjected to a review process beginning April 2009.

2.2 The announcement on the review process and timelines was communicated to all relevant stakeholder groups in Malaysia in writing, as well as through the MTCC website in February-March 2009. The review process officially commenced with the conduct of the First Public Comment on the MC&I(2002) to obtain feedback, comments and proposals to refine and improve the MC&I(2002) from the relevant stakeholder groups in Malaysia from 1 April-31 May 2009.

2.3 As a result of the First Public Comment period, comments were received from the Sarawak Forestry Corporation, Forestry Department Peninsular Malaysia, Malaysian Nature Society (Kuching Branch), Wildlife Conservation Society (Malaysia Program) and the Sarawak Timber Association. All the comments received were posted on the MTCC website on 16 July 2009.

2.4 The Standards Review Committee (SRC) was the multi-stakeholder forum tasked to review the MC&I(2002) and to develop the revised standard. The SRC comprised 15 members who were representatives nominated by their respective stakeholder groups i.e. the social (indigenous peoples and workers’ union), environmental and economic interest groups, and the relevant government agencies, from the three regions of Malaysia, i.e. Sabah, Sarawak and Peninsular Malaysia (Appendix I). MTCC served as the Secretariat of the SRC and played a facilitative role in the formation of the SRC.

2.5 To assist the Secretariat in its work, a Panel of Experts (PoE) comprising five members who are experts in the economic, environmental and social aspects of forest management, was formed. The PoE comprised individuals and those working in organisations which are not directly involved in the forest certification process and also not directly involved in representing any stakeholder group in the multi-stakeholder consultations (Appendix II). The PoE provided the Secretariat with independent advice on how comments and proposals received from the various stakeholder groups related to the Principles, Criteria, Indicators and Verifiers of the MC&I(2002) could be collated for the consideration of the SRC.

2.6 In its First Meeting on 23 July 2009, besides considering the comments received from the First Public Comment period, the PoE also considered the comments received from: (i) PEFC endorsement process of the MTCS; (ii) MTCC-Hamburg Joint Project; and (iii) considerations of ILO Core Conventions adopted by PEFC. The Secretariat consolidated the views of the PoE regarding the comments received and prepared a Working Draft dated 23 July 2009 for the consideration of the First Meeting of the SRC.
The SRC held its First Meeting on 29-30 October and 15-16 December 2009 to consider the Working Draft. As a result of the meeting, the First Draft of the revised standard which was agreed by the SRC to be named as the First Draft of the MC&I(Natural Forest) [to distinguish it from the existing MC&I(Forest Plantations) meant for the certification of forest plantations under the MTCS].

The First Draft of the MC&I(Natural Forest) was subsequently subjected to a Second Public Comment from 10 March to 9 April 2010. Comments were received from the following stakeholder groups:

(i) Forestry Department Peninsular Malaysia
(ii) Sabah Forestry Department
(iii) Sarawak Forestry Corporation
(iv) Forest Research Institute Malaysia
(v) Department of Irrigation and Drainage, Sabah
(vi) Department of Labour, Sarawak
(vii) Sarawak Biodiversity Centre
(viii) Malaysian Nature Society

The PoE held its Second Meeting on 29 April 2010 to provide its opinions on the comments received from the various stakeholder groups. A Second Draft of the MC&I(Natural Forest) was prepared by the Secretariat based on the comments received from the stakeholder groups and the opinions of the PoE.

The Second Draft of the MC&I(Natural Forest) was subsequently subjected to three regional multi-stakeholder consultations, i.e. in Kuching on 19-20 July 2010, in Kota Kinabalu on 22-23 July 2010 and in Kuala Lumpur on 26-27 July 2010.

The Third Draft of the MC&I(Natural Forest) incorporating the comments received from the various stakeholder groups through the regional consultations was reviewed by the Third Meeting of the PoE on 27-28 January 2011.

The Third Draft of the MC&I(Natural Forest) including the views of the PoE were subsequently considered by the Second Meeting of the SRC on 16-18 March 2011, resulting in the Final Draft of the MC&I(Natural Forest) dated 18 March 2011.

The Final Draft of the MC&I(Natural Forest) was subjected to a Third (final) Public Comment period from 14 May-12 July 2011, which resulted in comments and proposals received from the various stakeholder groups as follows:

(i) Wildlife Conservation Society (Malaysia Program)
(ii) Natural Resources and Environment Board, Sarawak
(iii) Sabah Forestry Department
(iv) Forestry Department Peninsular Malaysia
(v) Kadazandusun Cultural Association, Sabah
(vi) Forest Research Institute Malaysia
(vii) Sarawak Forest Department
(viii) Bioversity International
(ix) Johor National Parks Corporation
(x) Environmental Protection Department, Sabah
(xi) Persatuan Kedayan Sabah
(xii) Sarawak Biodiversity Centre
(xiii) Department of Labour Sarawak
(xiv) Department of Irrigation and Drainage, Sabah
(xv) Human Rights Commission of Malaysia (SUHAKAM)

The above comments were supplemented by comments submitted by the Secretariat.

The comments on the Final Draft were considered and finalised by the Third Meeting of the SRC held on 20-22 September 2011.

3. Terms and Definitions

The definitions of key terms used in the MC&I(Natural Forest) are as listed in Appendix III.
4. **Format of the MC&I (Natural Forest)**

The MC&I (Natural Forest) is formatted into three columns, with the first column containing the Criteria listed under the corresponding Principle. The second and third columns show the corresponding Indicators and Verifiers specified for each Criterion. In specific cases, slightly different Verifiers have been specified separately for Sabah, Sarawak and Peninsular Malaysia to take into account the regional differences.

5. **Review of the MC&I (Natural Forest)**

The MC&I (Natural Forest) will be reviewed and updated every five years, based on feedback, research findings and experience gained through its application in the field.

**STANDARDS REVIEW COMMITTEE**
Principle 1: Compliance with Laws and Principles
Forest management shall comply with all applicable laws of Malaysia and respect international treaties and agreements to which Malaysia is a signatory, and comply with all the Principles and Criteria contained in this standard.

DEFINITION OF KEY TERMS USED IN THE MC&I(NATURAL FOREST)

Adat: Adat means accepted norms and customs that govern the lives of indigenous communities, which include their way of life, basic values, systems of belief, codes of conduct, manners, conventions, agricultural and cultural practices according to which indigenous societies are ordered.

Biological control agents: Living organisms used to eliminate or regulate the population of other living organisms.

Biological corridor: Area of habitat connecting wildlife populations separated by human activities (such as roads, development or logging). This allows an exchange of individuals between populations, which may help prevent the negative effects of inbreeding and reduced genetic diversity (via genetic drift) that often occur within isolated populations. Corridors may also help facilitate the re-establishment of populations that have been reduced or eliminated due to random events (such as fires or disease). This may potentially moderate some of the worst effects of habitat fragmentation.

Biological diversity: The variability among living organisms from all sources including, inter alia, terrestrial, marine and other aquatic ecosystems and the ecological complexes of which they are a part; this includes diversity within species, between species and of ecosystems.

Chain of custody: The channel through which products are distributed from their origin in the forest to their end-use.

Chemicals: The range of fertilisers, insecticides, fungicides, and hormones which are used in forest management.

Criterion (pl. Criteria): A means of judging whether or not a Principle (of forest stewardship) has been fulfilled.

Customary rights: Rights which result from a long series of habitual or customary actions, constantly repeated, which have, by such repetition and by uninterrupted acquiescence, acquired the force of a law within a geographical or sociological unit.

Ecosystem: A community of all plants and animals and their physical environment, functioning together as an interdependent unit.

Encroachment: The act or action of using forest land contrary to the provisions provided for in forestry laws and regulations with regard to forest land uses.

Endangered species: Any species which is in danger of extinction throughout all or a significant portion of its range.

Exotic species: An introduced species not native or endemic to the area in question.

Forest management/manager: The people responsible for the operational management of the forest resource and of the enterprise, as well as the management system and structure, and the planning and field operations.
**Forest management area:** A forest management area refers to the clearly defined area which is under direct management of the company undertaking forest management assessment for the purpose of timber certification.

**Forest management unit:** A forest management unit (FMU) is a clearly defined forest area, managed to a set of explicit objectives and according to a long-term management plan.

**Forest plantation:** Forest stand in which trees have been established by planting or/and deliberate seeding or coppicing (where the coppicing is previously planted trees) with either native species or non-native species that meet all the following criteria, namely, one or two or few species, even-aged, and regular spacing.

**Forest worker:** An individual who is an employee of the FMU manager, a licencsee, contractor or processor, or is an independent owner/operator performing one or more phases involved in the harvesting of timber from a licence, or delivery of timber to a processor.

**Free, prior and informed consent:** A decision-making process that does not involve coercion/undue influence/manipulation (free), is made before activities are undertaken (prior), is founded upon a clear understanding (informed), and involves granting or withholding consent (saying ‘yes’ or ‘no’) to an activity, programme or policy (consent).

**Genetically modified organisms:** Biological organisms which have been induced by various means to consist of genetic structural changes.

**High conservation value forests:** High Conservation Value Forests (HCVFs) are those that possess one or more of the following attributes:

(a) forest areas containing globally, regionally or nationally significant concentrations of biodiversity values (e.g. endemism, endangered species, refugia); and/or large landscape level forests, contained within, or containing the management unit, where viable populations of most if not all naturally occurring species exist in natural patterns of distribution and abundance.

(b) forest areas that are in or contain rare, threatened or endangered ecosystems.

(c) forest areas that provide basic services of nature in critical situations (e.g. watershed protection, erosion control).

(d) forest areas fundamental to meeting basic needs of local communities (e.g. subsistence, health) and/or critical to local communities’ traditional cultural identity (areas of cultural, ecological, economic or religious significance identified in cooperation with such local communities).

**Indicator:** A qualitative, quantitative or descriptive attribute that, when periodically measured or monitored, indicates the direction of change.

**Indigenous peoples:** The existing descendants of the peoples who inhabited the present territory of a country wholly or partially at the time when persons of a different culture or ethnic origin arrived there from other parts of the world, overcame them and, by conquest, settlement, or other means reduced them to a non-dominant or colonial situation; who today live more in conformity with their particular social, economic and cultural customs and traditions than with the institutions of the country of which they now form a part, under state structure which incorporates mainly the national, social and cultural characteristics of other segments of the population which are predominant.

In the context of this standard, indigenous peoples in Malaysia refer to Aborigines in Peninsular Malaysia, and Natives in Sabah and Sarawak.

**Aborigines:** Aborigines in Peninsular Malaysia are indigenous peoples as defined in the Federal Constitution Article 160(2), and the Aboriginal Peoples Act, 1954, Section 3.
**Natives:**
Natives in Sabah are indigenous peoples as defined in the Federal Constitution Article 161(A), Clause 6 and the Interpretation (Definition of Native) Ordinance, 1952.
Natives in Sarawak are indigenous peoples as defined in the Federal Constitution Article 161(A), Clauses 6 and 7 and the Schedule to the Interpretation Ordinance, 2005 (Cap. 61).

**Landscape:** A geographical mosaic composed of interacting ecosystems resulting from the influence of geological, topographical, soil, climatic, biotic and human interactions in a given area.

**Local communities:** Permanent or stable human communities who rely on the forest resources and ecosystems, are having their own rules, cultural norms and expectations, are living in or adjacent to the FMU, and are affected by forest management operations conducted within the FMU.

**Local laws:** Includes all legal norms given by organisms of government whose jurisdiction is less than the national level, such as departmental, municipal and customary norms.

**Long term:** The time-scale of the forest owner or manager as manifested by the objectives of the management plan, the rate of harvesting, and the commitment to maintain permanent forest cover. The length of time involved will vary according to the context and ecological conditions, and will be a function of how long it takes a given ecosystem to recover its natural structure and composition following harvesting or disturbance, or to produce mature or primary conditions.

**Natural cycles:** Nutrient and mineral cycling as a result of interactions between soils, water, plants and animals in forest environments that affect the ecological productivity of a given site.

**Natural forest:** Forest areas where many of the principal characteristics and key elements of native ecosystems such as complexity, structure and diversity are present.

**Non-forest land use:** Land not primarily intended for growing or supporting a forest, including forest plantation.

**Non-timber forest products:** All forest products except timber, including other materials obtained from trees such as resins and leaves, as well as any other plant and animal products.

**Permanent reserved forest:** Any land constituted or deemed to have been constituted a permanent reserved forest under the National Forestry Act, 1984.

**Plantation:** Forest areas lacking most of the principal characteristics and key elements of native ecosystems which result from the human activities of either planting, sowing or intensive silvicultural treatments.

**Precautionary approach:** The essence of the precautionary approach is given in Principle 15 of the Rio Declaration, which states; “**Where there are threats of serious or irreversible damage, lack of scientific certainty shall not be used as a reason for postponing cost-effective measures to prevent environmental degradation.**”

**Principle:** An essential rule or element of forest stewardship.
**Regulated forest**: Forest area harvested in the production forest of the permanent reserved forests and has the forest structure, based on forest inventory, to sustain timber production.

**Sogit system**: ‘Sogit’ is a Kadazandusun system of redress, restitution or retribution which is inherent within the justice system of the *Adat* (Customary Laws). The ‘sogit’ is a socio-spiritual form of atonement or compensation of various kinds and descriptions and measures depending on which aspect of the *Adat* has been transgressed or violated against.

**Stakeholder**: Individuals and organisations with a legitimate interest in the goods and services provided by an FMU; and those with an interest in the environmental and social effects of an FMU’s activities, products and services. They include: those individuals and organisations which exercise statutory environmental control over the FMU; local people; employees; investors and insurers; customers and consumers; environmental interest and consumer groups and the general public.

**Succession**: Progressive changes in species composition and forest community structure caused by natural processes (nonhuman) over time.

**Tagal system**: The *Tagal* system comprises specific arrays of communally shared and accepted observances, rules and protocols in the management, conservation and sharing of benefits from traditional resources such as river, land and forest resources including *Sogia’an* (cooperatively and communally owned properties). The *Tagal* system is enforceable at two levels of the Kadazandusun justice system:

i. Native Courts Justice system

ii. Momolianistic Divine meted Justice system

Among the most noticeable *Tagal* system practiced by the Kadazandusuns today is the *Tagal Bawang* (River Resources *Tagal* system), a unique communal practice of river resource management, conservation and benefits sharing.

**Tenure**: Socially defined agreements held by individuals or groups, recognised by legal statutes or customary practice, regarding the "bundle of rights and duties" of ownership, holding, access and/or usage of a particular land unit or the associated resources there within (such as individual trees, plant species, water, minerals, etc).

**Threatened species**: Any species which is likely to become endangered within the foreseeable future throughout all or a significant portion of its range.

**Use rights**: Rights for the use of forest resources that can be defined by local custom, mutual agreements or prescribed by other entities holding access rights. These rights may restrict the use of particular resources to specific levels of consumption or particular harvesting techniques.

**Verifier**: Data or information that enhances the specificity or the ease of assessment of an indicator. Verifiers provide specific details that would indicate or reflect a desired condition of an indicator. They add meaning, precision and usually also site-specificity to an indicator. They may define the limits of a hypothetical zone from which recovery can still safely take place (performance threshold/ target). On the other hand, they may also be defined as procedures needed to determine satisfaction of the conditions postulated in the indicator concerned (means of verification).
